STATISTICAL REPORTING SERVICE • NEW MEXICO DEPARTMENT OF AGRICULTURE

ACKNOWLEDGEMENT

The New Mexico Crop and Livestock Reporting Service is pleased to present the 1983 edition of New Mexico Agricultural Statistics. This is the 23rd annual summary in a series which dates back to 1962 and it continues to be our most requested publication.

New Mexico Agricultural Statistics is the most complete accumulation of current statistical data related to agriculture in New Mexico. This issue contains the preliminary series of county estimates for livestock, crop production and cash receipts from agricultural marketings. Also included are State summaries on crop production, livestock inventory numbers, farm and ranch income, agricultural prices, grain storage and weather.

The data presented in this bulletin are developed primarily from sample surveys conducted throughout the year. The accuracy of our estimates is closely related to the responses by farmers and livestock producers to these surveys. Without the excellent cooperation received from New Mexico's farmers and ranchers, livestock producers and agri-business people the estimates presented in this bulletin and other statistical reports throughout the year would not be possible. A special "Thanks" is extended to these voluntary reporters, for without their willingness to provide facts about their operations this publication would not be possible.

We also wish to acknowledge the help we receive from County Extension Agents, University, State and Federal personnel who provide us with valuable information at their respective county meetings. Their insight and knowledge about their counties help us develop county level data for the county estimate program.

The publication of this bulletin is made possible through a cooperative agreement between the New Mexico Department of Agriculture and the Statistical Reporting Service - United States Department of Agriculture. Funds for its reproduction are provided by the New Mexico Department of Agriculture.

In closing, I want to thank the staff of the New Mexico Crop and Livestock Reporting Service, who have put this annual publication together. I also wish to acknowledge their work during the past year in developing estimates of high credibility for the State of New Mexico.

Donald G. Gerhardt

NEW MEXICO DEPARTMENT OF AGRICULTURE

OFFICE OF THE DIRECTOR/SECRETARY
Box 3189/Las Cruces, New Mexico 88003
Telephone (505) 646-3007

TO THOSE INTERESTED IN NEW MEXICO'S AGRICULTURE:

The New Mexico Department of Agriculture is pleased to cooperate in the production and publication of the New Mexico Agricultural Statistics. Agricultural statistics reflect activities of farmers, ranchers and agricultural businesses and are indicators of the health of the agricultural sector. Statistics from the nation's number one industry also provide producers and industry leaders with a basis for business decisions and for possible agricultural program corrections.

While agriculture is a dynamic industry, subject to whims of market and climatic conditions, New Mexico farmers and ranchers continue to show their faith in agrarian pursuits and provide an abundance of food and fiber for their fellowman. Similarly, collectors of statistical information from this sector faithfully report their findings, documenting another year of agricultural activities.

Sincerely,

W.P. Stephens

Fertilizer

1983 Inshipments

Fertilizer shipped into New Mexico in 1983 increased 2 percent from 1982 despite acreage reductions encouraged by the PIK program. Nitrogen materials shipped into the State increased slightly from last year totaling 63,973.6 tons. Phosphate shipments were up 4 percent from 1982 totaling 25,650 tons. Potash and fertilizer mixtures showed the largest percentage increases, 45 and 50 percent respectively. The only two classifications showing declines in shipments from the previous year were natural organic materials, down 75 percent, and miscellaneous fertilizers, down 5.5 percent.

Prices and Income

ASSETS and DEBTS - Farm and ranch assets totaled $11.1 billion in 1983, 4 percent below 1982 and the first reduction in assets recorded since 1957. Diminished real estate value was the major reason for the drop in assets as land values fell 5 percent from the previous year. Farm and ranch debts continued to climb in 1983 reaching an all time high of $1.4 billion. Real estate accounted for 56percent of all debt, compared to 58 percent in 1982.

CASH RECEIPTS - The 1983 cash receipts from farm marketings in New Mexico was $964.0 million dollars, up 1.5 percent from 1982. Livestock and livestock products accounted for 65.8 percent of the total and were valued at $634.7 million. Crops, valued at $329.3 million, represented 34.2 percent of the cash receipts. Cattle and calves continue to dominate all other commodities accounting for 46.8 percent of the cash receipts. Milk was second with 14.3 percent, while hay remained third with 7.4 percent of the receipts. Wheat, cotton products and chile ranked fourth through sixth, respectively, representing 4.9, 3.7 and 3.5 percent of all cash receipts. Sales from these six commodities make up 73.2 percent of all cash receipts from New Mexico farm marketings.

FARM INCOME CONCEPTS - Cash receipts from farm marketings represent gross income from the sales of crops, livestock, and poultry during the calendar year. The value of home consumption of farm products, inter-farm sales of livestock, and crops fed on farms where grown are not included in cash receipts. Production expenses such as feed, fuel, and fertilizer, and marketing costs are not subtracted from gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed, and marketed in another county. Cash receipts from marketings of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price, and changes in inventories. Marketings of livestock and poultry include the sales value of an animal only once, usually at the time when the animal is sold for slaughter or at final disposition.

Gross farm income includes four principal components: cash receipts from farm marketings, government payments, other farm income, and non-money income. Cash receipts represent gross receipts from commercial market sales as well as loans made or guaranteed by the CCC and other purchases under price support programs. Government payments to farmers are those payments made directly to farm producers in connection with farm programs. Other farm income is cash income from such sources as recreation, machine hire, and custom work. Non-money income includes the rental value of housing provided by farm dwellings and the value of farm products consumed directly in farm households.

Farm production expenses include current farm operating expenses for such items as wages paid to hired farm workers, outlays for repairs of farm equipment and operation of the farm, as well as purchases of oil, feed, and livestock. Overhead-type costs include charges for depreciation and other capital consumption, taxes on farm property, and interest.

Net change in farm inventories is the estimated physical change in livestock and crops owned by farmers, valued at average prices prevailing during the year.

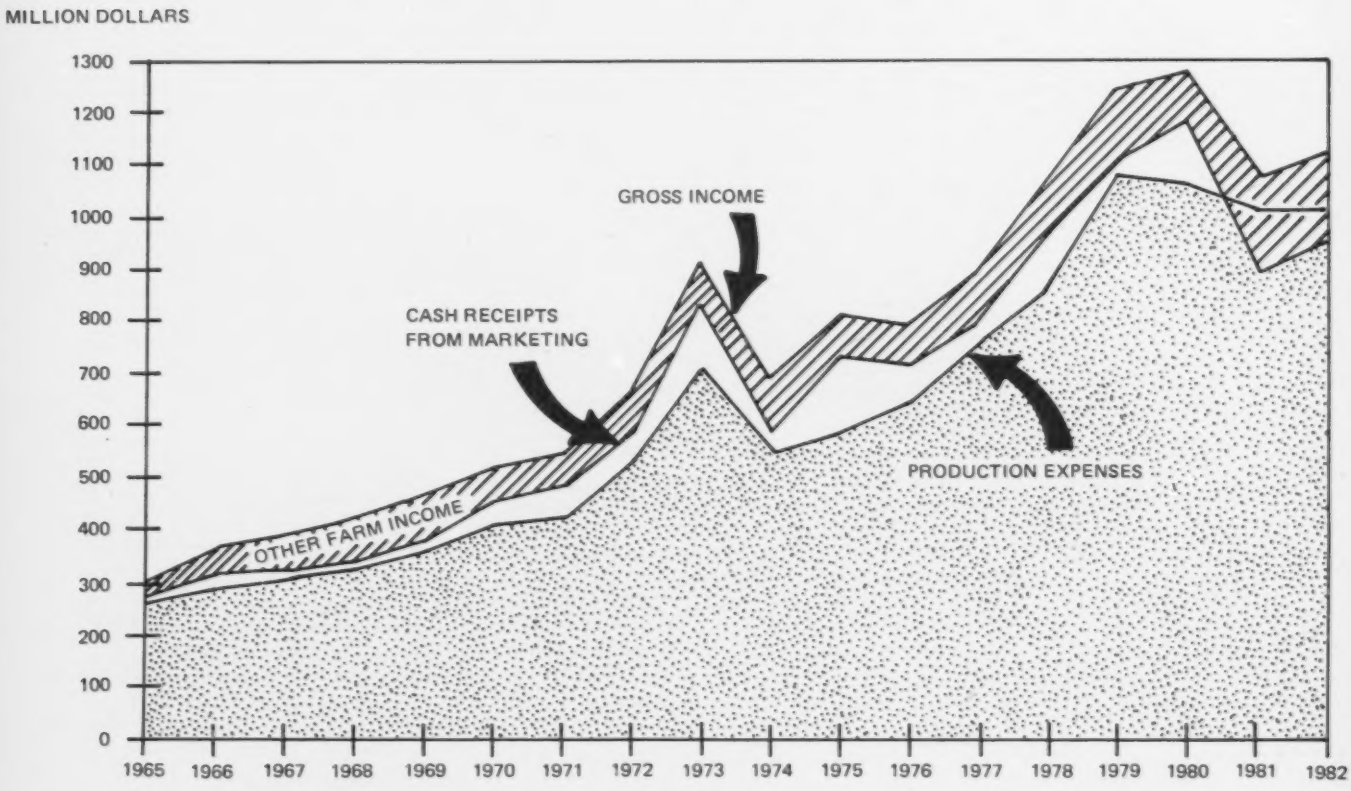
New Mexico Farm and Ranch Income and Expenses, 1965-1982



INCOME - Gross income increased 7 percent in 1982 to $1.14 billion but remained well below the 1980 record level of $1.33 billion. Cash receipts were up 5 percent, government payments jumped 23 percent, non-money income increased 12 percent, and other farm income rose 6 percent in 1982. Cash receipts from farm marketings represents 83.5 percent of gross farm income in 1982. Realized net income, the difference between gross income and production expenses, increased $56.4 million from 1981 to $95.5 million. Excluding 1981, this is the lowest level since 1969. Total net farm income, which adjusts for changes in inventory levels, is estimated at $64.1 million, the lowest level since 1965.

PRODUCTION EXPENSES - Farms and ranches had $1.04 billion in production expenses in 1982, an increase of 14.2 million dollars from the previous year. It was the second consecutive year that production expenses exceeded cash receipts from marketings.

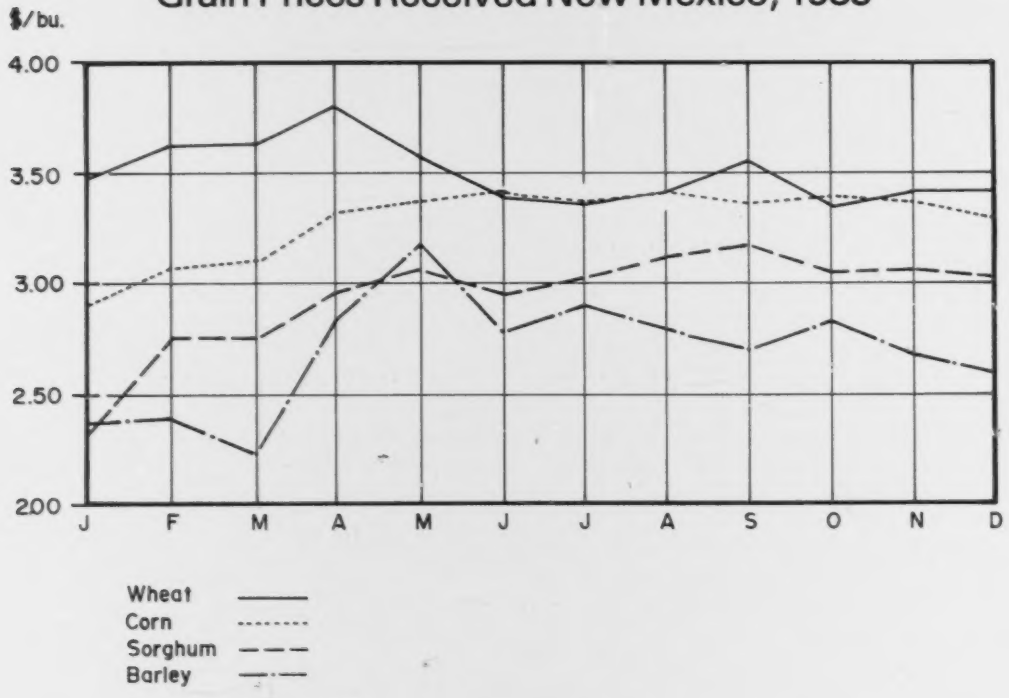
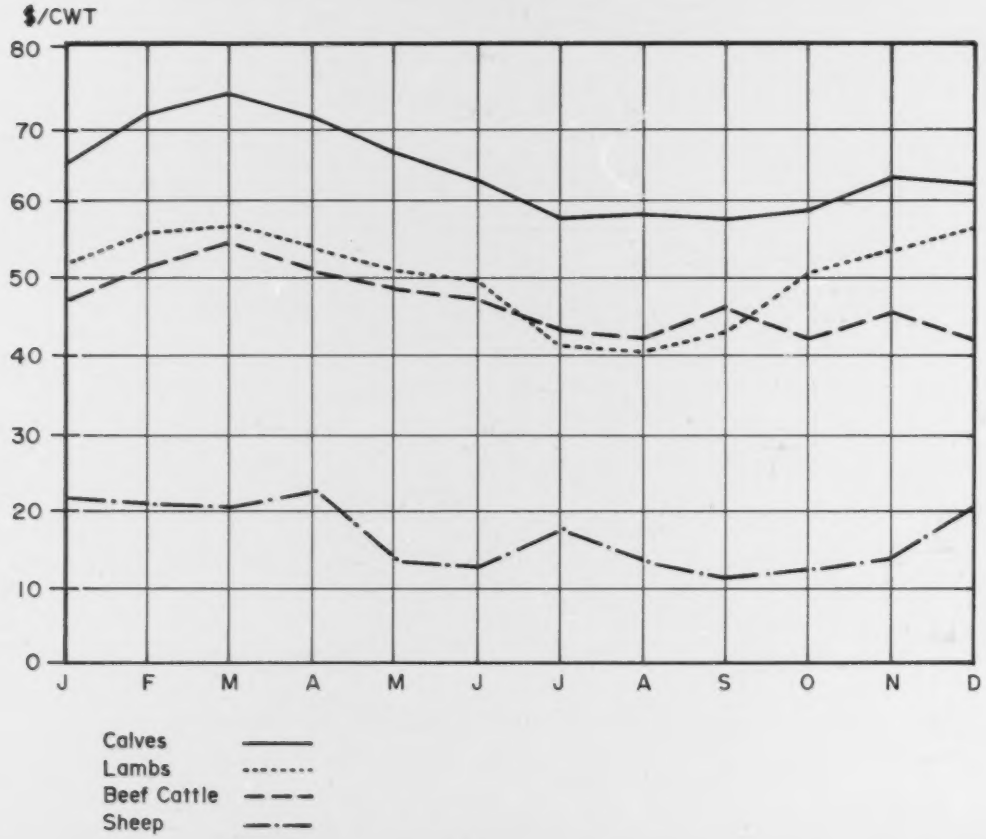
Grain Prices Received New Mexico, 1983



Livestock Prices Received New Mexico, 1983



Livestock

New Mexico livestock producers entered 1983 in an atmosphere of relative optimism. Stock were overwintering well, there was a good snowpack in the mountains and livestock prices were up from 1982. Wheat pastures in the eastern part of the State provided good grazing between snows and alfalfa fields hosted more stock than in previous years.

Range livestock came into the calving and lambing season in good flesh with a tolerable amount of supplementary feeding. Pasture and range conditions in the spring and early summer were good to excellent across most of the State. The calf and lamb crops were down from 1982 but the reductions were largely attributable to lower cow and ewe numbers.

Late June rains bolstered moisture supplies in the north and west but missed the southeastern part of the State where hot winds had severely dried the range. Persistent winds and a continued lack of precipitation soon threw the southeastern plains into drought. Ranchers in that region were forced to supply feed, haul water and reduce inventories. The drought grew in severity, becoming extreme by fall, and stayed that way until spring, 1984. Elsewhere in the State, ranchers enjoyed better range conditions but cattle and sheep prices were a disappointment.

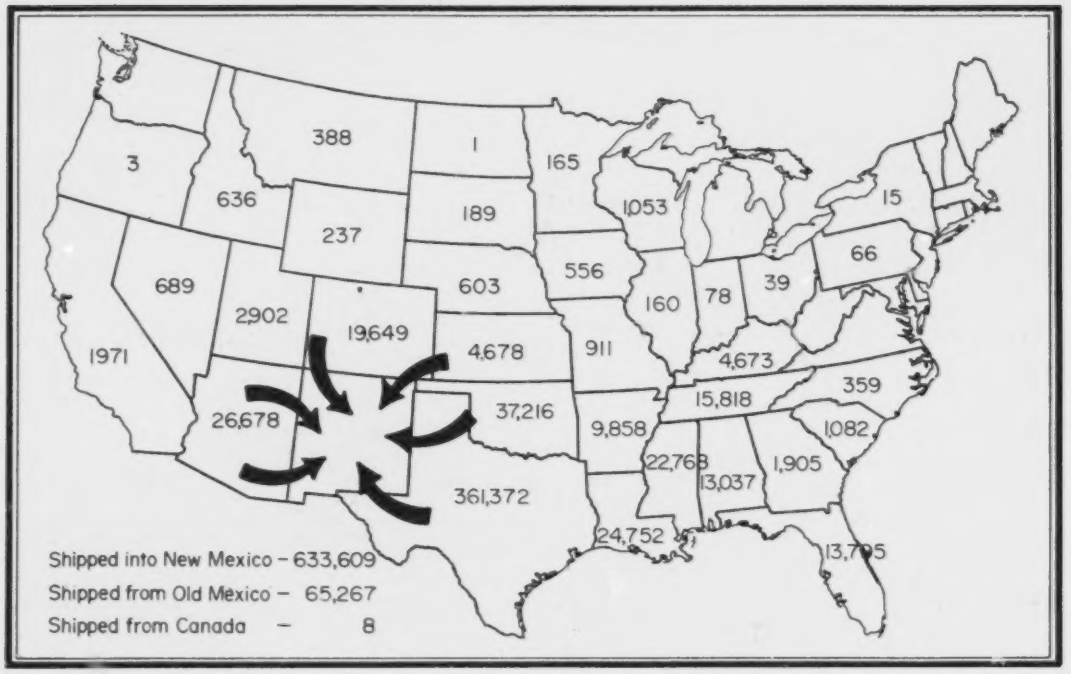
New Mexico's dairy industry continued to grow in 1983 with new dairies coming in and some existing dairies expanding. Milk production during the year was 16 percent above the 1982 total and more than double that recorded in 1978.

The New Mexico swine industry continued to decline in 1983, perpetuating a trend that began in 1980. Estimated as of December 1, 1983, the total hog and pig inventory was less than half that estimated in 1980 and the lowest New Mexico inventory estimate since 1907.

Egg production in the State in 1983 was down 5 percent from the previous year as layer numbers over the year were down 6 percent from 1982.

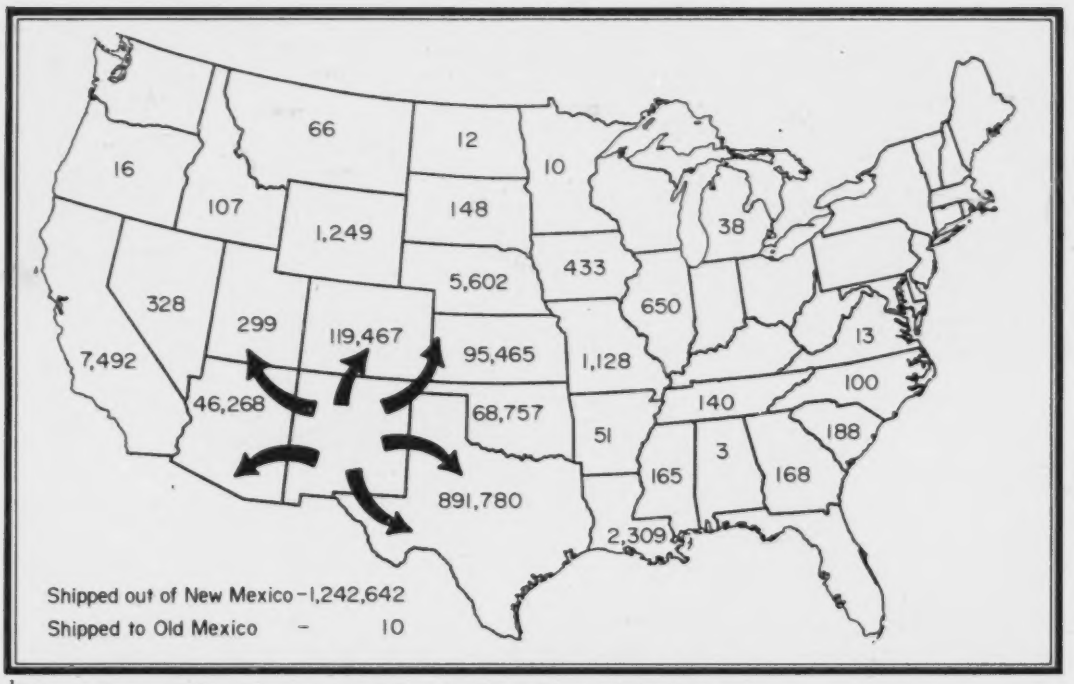
Cattle Number Shipped into New Mexico

BY STATE OF ORIGIN, 1983 [1]



Cattle Number Shipped Out of New Mexico

BY STATE OF DESTINATION, 1983 [1]



[1] Prior to January 1983, shipments to and from the Clovis Livestock Auction were excluded from the above totals. In shipments for 1982, including those to the Clovis Livestock Auction, were 619,440 head. Comparable out shipments for 1982 totaled 1,136,101 head.

1984	**1390**	**360.00**	**500400**

1/ As of January 1.

New Mexico cattlemen had an estimated 1.45 million head of cattle and calves in the State on January 1, 1983. Inshipments were down from the previous year for the first four months of 1983 but large numbers of cattle were brought in during May and June. The 1983 calf crop of 570,000 head was down slightly from the 580,000 head estimated for 1982. Extreme drought conditions, particularly in the southeastern plains, forced larger than normal outshipments of cattle from August through November. Outshipments for the year were up 9 percent from 1982 while inshipments were up just 2 percent. The January 1, 1984 estimate of cattle and calves in New Mexico was 1.39 million head, 4 percent below January 1, 1983 and 7 percent below January 1, 1982. This was the lowest January 1 inventory estimate since 1966.

1984	**589**	**43.50**	**25622**

1/ As of January 1.

The drought of 1983 was extremely hard on the sheep producers in the southeastern quadrant of the State. Operations in the major producing areas were forced to reduce inventory numbers because of limited range forage. Inventory of all sheep on January 1, 1984 totaled 589,000 head, 3 percent below last years inventory level. Sheep and lambs on feed partially offset declining inventory numbers by increasing 42 percent from 1983, totaling 64,000 head. Stock sheep, at 525,000, declined 40,000 head from 1983, 7 percent below the previous year. The 1983 lamb crop is estimated at 350,000 head, 25,000 fewer than were saved in 1982. Lamb's saved per 100 ewes one year old and older averaged 77 in 1983 compared with 80 in 1982 and 87 in 1981.

Field Crops

Principal crops grown in New Mexico during 1983 seemed to either flourish or falter due to extremes in weather conditions. Small grains and irrigated feed grains had very successful growing seasons, while spring seeded dryland crops suffered from a severe lack of moisture. Precipitation during the first three months of the year was running above normal in most areas. Reservoir storage in the Rio Grande Basin was above average by April 1 due to several strong storm systems in March. By the end of April, however, soil moisture supplies were being depleted in the eastern plains region of the State. Small grains would not be affected by the increasing shortage of moisture, as earlier accumulation was sufficient to take the crops through harvest. Both wheat and barley crops produced excellent yields. Spring planting was delayed due to cooler than normal soil temperatures, with most crops running about two weeks late. Alfalfa harvest also lagged behind normal. By August 1, accumulated rainfall was well below normal on the eastside. Dryland sorghum and cotton fields were questionable at this time, but the irrigated crops were generally rated good. As fall harvest time neared, the corn crop was in excellent shape, as was irrigated grain sorghum. Corn growers produced a record high 140 bushels per acre, as virtually all of the corn acreage is irrigated. A later than normal growing season allowed irrigated cotton fields to fully mature and produce extremely high yields. The south and east portions of the State continued to suffer from a drought situation as accumulated precipitation was only 50 percent of normal at some locations. Non-irrigated spring seeded crops generally produced disappointing yields. By year's end, fall seeded small grains for 1984 harvest were entering the dormant stage in favorable condition.

New Mexico wheat growers produced a record high 13,630,000 bushels in 1983, compared with 12,750,000 bushels the previous year. Acres harvested in 1983 fell 8 percent from the previous year, but yield increased 4.0 bushels to a near record 29.0 bushels per acre. Favorable weather patterns during the growing season and at harvest were responsible for the record production, along with USDA's Payment in Kind (PIK) program which allowed farmers to take marginal wheat fields out of production and receive government wheat in exchange. This left better yielding fields for harvest which pushed the State average yield to 29.0 bushels per acre. The average price received for the 1983 crop increased $.03 per bushel to $3.65. Value of the crop reached a record $49.8 million, up 8 percent from a year earlier.

Fruits, Vegetables and Nuts

Apples

New Mexico apple orchards were severely affected by below freezing temperatures at critical stages of development in 1983. This resulted in the lowest production of record over the past decade in the State. Growers produced only 6,000,000 pounds of the fruit in 1983, down 50 percent from the previous year. The average yield per bearing tree was just 55 pounds, compared with 108 pounds per tree in 1982. The average price received for 1983 harvested apples was $.144 per pound, or $6.04 per bushel. This compares with $5.19 per bushel received for the 1982 crop. Value of the 1983 crop fell 42 percent to $864,000.

1983	**29000**	**73.0**	**21170**

Cold temperatures through late spring kept pecan trees across the State dormant longer than usual. Some freeze damage was reported primarily from the eastern part of the State. Mild fall weather, however, allowed the somewhat late crop to fully develop, yielding record crops in some localities. Gradual maturation of recent plantings coupled with good crops from mature orchards made the 1983 crop the largest ever in New Mexico.

Prices received by New Mexico pecan growers were fully 10 cents per pound below those received for the 1982 crop. As a result, the value of the crop was up just 2 percent from 1982.

Lettuce

Lettuce, a cool season crop, has two distinct growing seasons in New Mexico; spring and fall. Historically, more acreage is planted in the fall since spring winds tend to cause tip burn problems. However, with the introduction of the new resistant varieties, spring acreage has seen a dramatic increase. Harvested acreage in 1983 was up 53 percent over spring 1982. Fall acreage was down slightly in 1983 but with a strong market the value of production rose 35 percent. The combined value of spring and fall lettuce was 23.1 million dollars.

Onions

Onion production in 1983 is estimated at 1.2 million cwt., down 24 percent from last year's record production of 1.6 million cwt. The total value of production is estimated at 11.1 million dollars, 22 percent below 1982. The major commercial onion varieties grown in New Mexico include Grano, Granex, Sweet Spanish and Mid-Summer Hybrids. Onions grown in New Mexico are primarily shipped for fresh market. Harvest normally begins in late May and continues through September. This is one of the longest non-storage shipping seasons in the country. When the New Mexico harvest is at its peak it can supply as much as 30 percent of the Nations market.

Grapes

New Mexico grape acreage has been rapidly increasing during the past few years. Total grape acreage in 1983 is estimated at 1,450 acres, 169 percent greater than in 1982 and nearly eight times the 1981 acreage.

Production at commercial vineyards during 1983 is estimated at 190 tons. This production is broken down by year of planting in the table to the right. Approximately 175 tons of this production was used to make commercial wine and an estimated 15 tons were used on the farms where produced.

STATISTICAL REPORTING SERVICE • NEW MEXICO DEPARTMENT OF AGRICULTURE

PUBLICATIONS ISSUED BY THE NEW MEXICO CROP AND LIVESTOCK REPORTING SERVICE

NEW MEXICO AGRI-INFO

A 2-4 page report issued twice monthly.
Major topics and when information is usually available are:
---Current Crop Prospects - Monthly
---Agricultural Prices - Monthly
---Cattle Inventory - Semi-Annually
---Grain Stocks - Quarterly
---Cattle on Feed - Quarterly
---Livestock Shipments - Quarterly
---Milk Production and Cow Numbers - Quarterly
---Egg Production - Quarterly
---Vegetables, Fruits, and Nuts - Seasonal
---Range and Pasture Conditions - Monthly April to December
---Wool Production - April
---Hogs and Pigs - Quarterly
---Livestock Slaughter - Monthly
---Hay Stocks - Semi-Annually

WEEKLY CROP WEATHER

A 2 page report issued each Monday.
---Temperature and Precipitation Selected Locations
---State Weather Summary
---Planting, Harvesting, and Crop Development Progress
---Range and Livestock Conditions

CROP ACREAGES AND PRODUCTION

A 2-4 page summary issued after each of the four major crop surveys (February Intentions, June Acreage, Wheat Seedings, Annual Summary).

LIVESTOCK INVENTORY AND PRODUCTION

A 2 page summary issued three times a year as an annual summary for cattle and calves, sheep and lambs, and dairy.

CHILE SUMMARY

A 2 page annual summary of the New Mexico chile crop issued in March.
